PERMABLOK PLUS+ CLEANING GUIDE

We recommend cleaning at least once a week to extend the lifespan of the upholstery, which will prevent dirt and contamination buildup and permanent staining. In the event of a spill, wipe off any excess right away with a dry white cloth or fabric, but be careful not to spread onto the remaining surface.

Clean the whole surface in a circular motion using liquid hand soap (pH neutral) and water (1 part soap to 9 parts water). Check the Approved Cleaners guide for recommended cleaning products. Wipe with a clean damp cloth to get rid of any excess soap. Repeat as needed and then let dry.

If there is any buildup that cannot be removed with soapy water, a mixture of 1 part isopropyl alcohol to 9 parts water can be used as a last resort. (Remember, using alcohol on a regular basis can affect the properties of the product.)

Once a month, you can use a soft-bristle brush for a deeper cleaning. Remember, light colors need more care, more often.

Note: The cleaning products recommended were used in a laboratory testing. Spradling Group® has no relationship with the manufacturers of those cleaning products.

**Disinfectants

In addition to cleaning, healthcare facilities maintain disinfecting regimens to reduce the spread of infections. There are a wide variety of available biocides that include bleaches, peroxides, and quaternary ammonium products, among others. They should always be used at the recommended dilution; never in concentrated form. To prolong the life of coated fabrics, the disinfectants should be rinsed off after each use. It should be noted that misuse of disinfectants is the major source of surface deterioration. Spradling International, Inc.® continually evaluates cleaners/disinfectants, and a list of those tested can be found on our website.

Abrasion test results exceeding ACT Performance Guidelines are not an indicator of product lifespan. Multiple factors affect fabric durability and appearance retention.
